SMS Bespoke Workflow

OVERVIEW

Our customers sometimes seek a SMS solution which is not 'out of the box'. It may require complexity in message delivery and in the processing of message replies flowing in from users. We have a range of tools that allow for conditional routing of messages, processing of reply messages based on their content, and a business rules engine that allows for 'If this then do that' scenarios.

SMS

Setting up pre-defined messages, setting messages to go out in the future, receiving and processing reply messages and applying business rules are all things we can provide. If you have a requirement for workflow with a SMS element, we can show you how you can implement it. If you have IT systems that trigger events, we can show you how to send SMS messages out based on those events.

UPGRADE WITH SMS+

SMS+ enhances regular SMS. Adding longer message length and allowing rich text content, you also gain the ability to brand your messages with your corporate logo. You can add barcodes or QR codes. You can encrypt your messages and set them to expire after a certain time. Messages sent via SMS+ can be read only by the intended user, providing the ideal solution for your more sensitive business communications.
