## SMS Emergency Communications

#### OVERVIEW

In emergencies, mobile networks get busy. SMS is the last service to go down, and the first to come back up. Setting up your emergency communications plan ahead of time is key to taking effective action in emergencies.

#### SMS

With SMS, you can set up group distribution lists ahead of time. We can guide you through this process. You can then send an SMS to large numbers of people in an emergency from our web portal, our mobile apps or your own software.

#### UPGRADE WITH SMS+

SMS+ allows you to figure out who is okay and who is unaccounted for. Step 1 is for you to ask your people to confirm their safety status by SMS. Step 2 is for your people to text back a response. Step 3 is to run the 'Find our folks' report which will show you who is accounted for. Setting to one side the folks who are okay, you can concentrate your resources on those who may need help. SMS+ delivers duty of care to your people.
