SMS Internet of Things IOT

OVERVIEW

The internet of things is connecting billions of devices allowing integration of services to better serve our lives. As internet connected devices detect events, they can trigger SMS communications. Example : Use SMS with IFTTT (www.ifttt.com) to send SMS alerts when there is a key event.

SMS

Our software add-ins provide ready to go connectivity for software developers to leverage SMS into their own IOT applications. If you are technically minded, visit our developers center to learn more about our API's, gain access to code samples showing how to add SMS in the major programming languages.

UPGRADE WITH SMS+

SMS+ enhances regular SMS. With longer message length and rich content, you also gain the ability to brand your messages with your corporate logo. You can encrypt your messages, and set them to expire after a certain time. Messages sent via SMS+ can be read only by the intended user, providing the ideal solution for your more sensitive communications.
