SMS Machine to Machine M2M

OVERVIEW

ATM software detects faults for resolution. Vending machines know when they are getting low on stock. As machines connect to the internet, the use of SMS to alert engineers when equipment needs re-stocking, maintenance or repair allows fast response to critical events.

SMS

Our software add-ins provide ready to go connectivity for software developers to leverage SMS into their own M2M applications. If you are technically minded, visit our developers center to learn more about our API's, gain access to code samples showing how to add SMS into your software. We have code samples in the major programming languages.

UPGRADE WITH SMS+

SMS+ enhances regular SMS. With longer message length and rich content, you also gain the ability to brand your messages with your corporate logo. You can encrypt your messages, and set them to expire after a certain time. Messages sent via SMS+ can be read only by the intended user, providing the ideal solution for your more sensitive communications.
