## SMS Third Party Software

#### OVERVIEW

Each industry vertical attracts a group of software developers competing to provide value added software. We work with them to allow them to add SMS as a communications channel. This adds functionality and an incremental revenue stream for our partners.

#### SMS

Our software add-ins provide ready to go connectivity for software developers to leverage into their own products. If you are technically minded, visit our developers center to learn more about our API's, gain access to code samples showing how to add SMS in the major programming languages.

#### UPGRADE WITH SMS+

SMS+ enhances regular SMS. With longer message length and rich content, you also gain the ability to brand your messages with your corporate logo. You can encrypt your messages, and set them to expire after a certain time. Messages sent via SMS+ can be read only by the intended user, providing the ideal solution for your more sensitive communications.
